TECHNICAL SKILLS

BI & Reporting

(Tableau, Looker, Quick Sight, PowerBI)

Programming

(Python, R, SQL (PostgreSQL, SQL Server))

ETL/ELT & Processing

(Airflow, dbt, Airbyte, Spark, Git)

Cloud Platforms

(AWS (Athena, Glue, RedShift, S3), BigQuery, Snowflake)

Web & Marketing Analytics

(Google Analytics & Google Ads)

EDUCATION

ANADOLU UNIVERSITY, Bachelors of Science

Management Information Systems

- Database Management Systems (DBMS)
- Data • Warehousing and Business Intelligence
- Data Analysis and Modeling
- Decision Support Systems
- E-commerce and Digital Marketing
- Statistical Analysis
- System Analysis and Design

INONU UNIVERSITY, Associate Degree

Computer Programming

- Algorithms and Data Structures
- Object-Oriented Programming (OOP)
- Database • Systems / Database Programming
- Internet Programming / Web Technologies
- Operating Systems
- Software Testing and Quality

CERTIFICATES

AWS Cloud Technical Essentials

Amazon Web Services

SQL for Data Science

University of California, Davis

Visual Analytics with Tableau

University of California, Davis

Data Analysis with Python

IBM

PROFESSIONAL EXPERIENCE

Data Analyst & Analytics Engineer, Paymentap

02/2024 – 10/2025

Managed end-to-end data pipelines, specifically focusing on Data Collection and ETL Automation to ensure data integrity and accessibility, driving business growth through Marketing Analysis, Segmentation, Reporting, Dashboards, and A/B Testing. (Fintech)

Data Analyst, Upwork

04/2024 – Present

Data-Driven Consulting and Visualization.

PORTFOLIO

AWS End-to-End Data Analytics for SaaS

Why have conversions in our mobile app been declining for 6 months? To answer this question, I implemented the following to create a continuously trackable solution: I integrated fragmented data from multiple sources (GA4, CRM, ADS) into Amazon S3 using Airbyte, creating a single, reliable source for analysis. Then, I created ETL pipelines with AWS Glue to clean and transform the raw data. I performed extensive SQL analysis using Amazon Athena. Finally, I visualized key findings in a dynamic dashboard with Amazon QuickSight, enabling continuous and easy tracking of business metrics. repeated the process daily.

Feedback Analysis on a New Product Launch

What are people thinking? To support data-driven decision-making for product and marketing teams, I analyzed user feedback from the company's new product social media launch and review videos. In this process, I applied sentiment analysis, topic analysis, and question identification to uncover what users liked, criticized, and were most curious about. The analysis revealed four key areas for improvement and five high-interest topics. Following these insights, product page engagement increased by 18%, and negative feedback decreased by 12%.

E-Commerce Admin Dashboard

Can the administrator keep track of everything in one place? A dynamic Tableau dashboard was developed that instantly tracks critical ecommerce metrics for business leaders, including Total Orders, Total Spend, Unique Customers, and Monthly Revenue Trend. The solution provides high-level summaries of top-performing customers and categories, while also offering a "Products" tab for in-depth analysis of individual product performance and inventory status.
