PROFESSIONAL EXPERIENCE

Analytics Engineer, Paymentap 01/2024 – 01/2026

- **Data Architecture & Engineering:** Designed and maintained scalable ELT pipelines using dbt (staging/mart layers) and Airflow on BigQuery and Snowflake, ensuring data consistency and governance across departments. Reduced reporting latency by 70% and established a unified single source of truth that served as the foundation for cross-functional business reporting and strategic decision-making.
- **Growth & Product Analytics:** Integrated GA4, CRM, and paid media data into centralized reporting models to support cross-functional decisions and product roadmap prioritization. Designed RFM segmentation and A/B testing frameworks across the onboarding funnel, contributing to measurable improvements in Marketing ROI, Activation Rate, and CAC. Built automated KPI dashboards enabling real-time performance tracking.

Data Analyst, RedStone 01/2023 – 01/2024

- Built and maintained ELT workflows with n8n to consolidate GA4 and Amplitude data into structured SQL-based reporting layers, replacing manual client reporting with scheduled, automated pipelines.
- Delivered funnel, cohort retention, and conversion analysis for SMB SaaS and e-commerce clients, querying centralized data models to surface friction points that informed product and marketing decisions.

Data Analyst, Upwork (Freelance) 01/2023 – Present

- Architected unified data models in BigQuery and AWS Athena, transforming siloed raw data into high-performance reporting layers for cross-functional business requirements across fintech and e-commerce clients.
- Delivered executive-level Tableau and Looker dashboards, streamlining KPI tracking and enabling data-driven strategic decisions for global clients.

TECHNICAL SKILLS

BI & Reporting
(Tableau, Looker, QuickSight, PowerBI, Amplitude)

Programming
(Python, R, SQL (PostgreSQL, SQL Server))

ETL/ELT & Processing
(Airflow, dbt, Airbyte, PySpark, Git, n8n)

Cloud Platforms
(AWS (Athena, Glue, RedShift, S3), BigQuery, Snowflake)

Web & Marketing Analytics
(Google Analytics, Google Ads, GTM)

EDUCATION

Bachelors of Science, ANADOLU UNIVERSITY
Management Information Systems

Associate Degree, INONU UNIVERSITY
Computer Programming

PORTFOLIO

AWS End-to-End Data Analytics for SaaS

Why have conversions in our mobile app been declining for 6 months? Architected a scalable end-to-end ETL framework on Amazon S3 using Airbyte to integrate fragmented mobile app data from GA4, CRM, and Ad platforms. Engineered AWS Glue & Athena pipelines to transform and process 500k+ granular event logs, diagnosing a 6-month conversion decline. Delivered a QuickSight dashboard that identified critical drop-off points in the onboarding funnel, leading to data-driven UI/UX optimizations.

AI-Powered Analytics Copilot (LLM-Driven BI)

How can we eliminate the ad-hoc reporting burden and accelerate decision-making? Architected an end-to-end AI agent using LangChain and Claude-3.5-Sonnet to convert natural language into optimized SQL, reducing reporting latency from hours to seconds. Engineered an autonomous anomaly detection system using statistical Z-scores and an AI Insight Layer to translate raw data into strategic business recommendations. This system bypassed technical barriers, shifting the data team's focus from manual tasks to high-impact strategic roadmaps.

Optimizing Product Activation & Retention

What if they don't see? Utilized Amplitude to identify critical user activation triggers and 'Aha! Moments' for a subscription-based SaaS. Through behavioral cohort and correlation analysis, discovered that users failing to visualize data in the first session were 3x more likely to churn. Spearheaded the redesign of the onboarding flow based on these insights, achieving a 22% increase in activation rates and a measurable uplift in Day-7 retention.

ELT Pipeline for E-Commerce Analytics

Eliminate Manual Reporting & Ensure Data Reliability Engineered an end-to-end ELT architecture integrating AWS S3, Snowflake, dbt, and Tableau with incremental MERGE-based ingestion and modular dbt models across staging, intermediate, and mart layers with snapshot tracking. Integrated Apache Airflow with Cosmos for dbt orchestration, implemented metadata logging for pipeline observability, and built a dbt Log Tracker dashboard — reducing daily processing time from 3 hours to 12 minutes.

CERTIFICATES

AWS Cloud Technical Essentials
Amazon Web Services

Visual Analytics with Tableau
University of California, Davis

SQL for Data Science
University of California, Davis
